

JCPT0807HD / JCPT1008 / JCPT1212HD / JCPT1412HD / JCPT1612HD

Product Features

Extension Deck

Instead of the usual extension deck, we added a stopper at the middle between platform and extension deck. This allows users to have flexibility on the extension especially at narrow spaces.

Smart Clip Guardrails

The Gorly Scissor lift Guardrails are being locked with smart clips. This smart clips help user to easily fold / raise the guardrails in within 1 minutes without required any single tools.

Secure Tray Locker

A locker installed on both tray handle which provide users an option to lock both left right tray from being access by unauthorized person.

Charger Power Plug

Cable charger often damage due to improper keeping. Therefore we designed our scissor lift cable charger to roll in as shown in picture.

Bumper

An additional bumper is installed on both left and right of the scissor lift. This helps to minimize from the damages done directly to scissor lift body when operating at narrow spaces.

Emergency Button

Should there be any breakdown while platform is raised, user may simply press on the emergency button to lower down the platform. The emergency button is located at the back of the scissor lift.

Compact Maneuverability

All model have front-wheel drive and most models feature zero inside turning radius for excellent maneuverability in tight spaces. Also it is equipped with non-marking tires which prevent scuffing floors or picking up debris that could otherwise damage a floor.

Easy Handling

User friendly joystick which help users to easily operates the scissor lift. The joystick also equipped with an emergency stop button and monitor that display the balance power as well as error codes when something went wrong.

Easy Service

There is an on-board diagnostic installed. Errors code will be displayed from the monitor when something went wrong. The error code basically help operators troubleshoot on the fly and make adjustments in the field to maximize uptime.

Scheduled Maintenance

Hour meter is installed on the scissor lift to monitor total hour usage. With this, it helps users to perform its scheduled maintenance from time to time. Scheduled maintenance is necessary to assure the scissor lift is in good condition at all time.

Long Operating Hours

Our scissor lift JCPT1612 & JCPT1412 is installed with 4x12V Trojan battery. A full overnight charge on the battery could allow users to operate the lift for 8 hours without any charge in between. This would definitely increase the efficiency for users to complete their work at shorter time.

Simple System

The entire hydraulic system is being designed to be simple and easy for trouble shooting. Any malfunction parts can be easily replace.
